

## Program Overview & Learning Objectives

**Assembly Title:** *The Crazy Bottles & Cans Show*

**Grades:** K–6

**Program Length:** Approx. 45 minutes

---

### **Program Overview:**

*The Crazy Bottles & Cans Show* is a high-energy school assembly that teaches K–6 students the importance of recycling in a fun, engaging, and unforgettable way. Through original songs, humor, student competitions, and interactive storytelling, the show explores the full life cycle of bottles and cans—from raw materials, to manufacturing, to consumer use, to recycling, and back again.

By taking students on this journey, the program makes the recycling process easy to understand while highlighting the real-world impact of reducing waste. The show also introduces the concept of CRV (California Redemption Value), landfills, and how recycling helps protect Earth’s limited natural resources. It’s science, sustainability, and silliness all rolled into one.

## **Learning Objectives:**

*By the end of the assembly, students will be able to:*

- Understand the importance of reducing, reusing, and recycling in daily life.
  - Describe the journey of a recyclable item from raw materials to reuse.
  - Explain how recycling helps conserve natural resources and reduce landfill waste.
  - Recognize the value of CRV and how it encourages recycling behavior in California.
  - Identify the materials commonly used in bottles and cans and how they can be repurposed.
- 

Before the assembly, we will provide teachers with a selection of fun, age-appropriate water education videos to reinforce key concepts in the classroom. These videos extend the learning with catchy songs, humor, animated explanations, and engaging visuals that keep students excited about water science.
