

SONG LYRICS

Water Cycle (Rock Mix)

(M.Beckwith) ©2005 Building Block Entertainment Inc.

Drops rise in the atmosphere
When they're heated by the sun
Soon they all will disappear
When evaporation's done
And then they chill
And then they crowd
And then they will
Form a cloud
A condensation cloud

(CHORUS)

Evaporation
Up to the sky
Condensation
A cloud up high
Precipitation
The Drops fall down
Then water's back on the ground

Wind blows drops to mountain tall
They're ready to precipitate
Those heavy drops are going to fall
To the ground in pouring rain
Into a river
Into a pond
Percolating
Under ground
Another time around

(repeat CHORUS)

Just keeps going round and round
That's the water cycle

Evaporation
Condensation
Precipitation
Collection
Just keeps going round and round
That's the water cycle
